# Recursive solution - pseudocode

```
hanoi(nDisks, initPeg, tempPeg, finalPeg):  
    if nDisks == 1:  
        print 'move disk from', initPeg, 'to', finalPeg  
        return  
    hanoi(n - 1, initPeg, finalPeg, tempPeg)  
    print 'move disk from', initPeg, 'to', finalPeg  
    hanoi(n - 1, tempPeg, initPeg, finalPeg)
```
